7	Semester-wise Courses & Credit Distribution	15
8	Course Level Learning Learning Outcomes	15
9	Teaching Learning Process	50
10	Assessment & Evaluation	51

Background

Considering the curricular reforms as instrumental for desired learning outcomes, all the academic departments of Maharaja Ganga Singh University Bikaner, made a rigorous attempt to revise the curriculum of postgraduate programs in alignment with National Education Policy-2020 and UGC Quality Mandate for Higher Education Institutions-2021. The process of revising the curriculum could be prompted with the adoption of the “Comprehensive Roadmap for Implementation of NEP-2020”. The Roadmap identified the key features of the Policy and elucidated the Action Plan with well-defined responsibilities and an indicative timeline for major academic reforms.

The process of revamping the curriculum started with a series of webinars and discussions conducted by the University to orient the teachers about the key features of the Policy, enabling them to revise the curriculum in sync with the Policy. Proper orientation of the faculty about the vision and provisions of NEP-2020 made it easier for them to appreciate and incorporate the vital aspects of the Policy in the revised curriculum focused on creating holistic thoughtful, creative, and well-rounded individuals equipped with the key 21st-century skills ‘for the development of an enlightened, socially conscious, knowledgeable, and skilled nation’.

With NEP-2020 in the background, the revised curricula articulate the spirit of the Policy by emphasising upon - an integrated approach to learning; innovative pedagogies and assessment strategies; multidisciplinary and cross-disciplinary education; creative and critical thinking; ethical and Constitutional values through value-based courses; 21st century capabilities across the range of disciplines through life skills, entrepreneurial and professional skills; community and constructive public engagement; social, moral, and environmental awareness; Organic Living and Global Citizenship Education (GCED); holistic, inquiry-based, discovery-based, discussion-based and analysis-based learning; exposure to Indian knowledge system, cultural traditions and literature through relevant courses offering “Knowledge of India, fine blend of modern pedagogies with indigenous and traditional ways of learning; flexibility in course choices, student-centric participatory learning; imaginative and flexible curricular structures to enable creative combinations of disciplines for study; offering multiple entry and exit points, alignment of Vocational courses with the International Standard Classification of Occupations maintained by the International Labor Organization; breaking the silos of disciplines; integration of extra-curricular and curricular aspects, exploring internships with local industry, businesses and artists and craft persons; closer collaboration between industry and higher education institutions for technical, vocational, and science programs, and formative assessment tools to be aligned with the learning outcomes, capabilities, and dispositions as specified for each course. The university has also developed a consensus on Blended Learning with 10% component of online teaching and 60% face-to-face classes for each program.

The revised curricula of various programs could be devised with concerted efforts of the faculty, Heads of the Departments, and the Deans of Schools of Study. The draft prepared by each department was discussed in a series of discussion sessions conducted at the Department, School, and University levels. The leadership of the University has been a driving force behind the entire exercise of developing the uniform template and structure for the revised curriculum. The Vice-Chancellor of the University conducted series of meetings with Heads and Deans to deliberate upon the vital parameters of the revised curriculum to formulate a uniform template featuring Background, Programme Outcomes, Programme Specific Outcomes, Postgraduate Attributes, Structure of Masters Course, Learning Outcome Index, Semester-wise Courses and Credit Distribution, Course-level Learning Outcomes, Teaching-Learning Process, Blended

Learning, Assessment and Evaluation, Keywords, References, and Appendices. The experts of various Board of Studies and School Boards contributed to a large extent in giving the final shape to the revised curriculum of each program.

To ensure the implementation of curricular reforms envisioned in NEP-2020, the University has decided to implement various provisions in a phased manner. Therefore, the curriculum may be reviewed annually so as to gradually include all relevant provisions of NEP-2020.

Program Outcomes

On completing Masters in the Faculty of Science, the students shall be able to realize the following outcomes:

PO	Description
PO1	Acquired knowledge with facts and figures related to various subjects in pure sciences such as Physics, Chemistry, Botany, Zoology, Mathematics, etc.
PO2	Understood the basic concepts, fundamental principles, and scientific theories related to various scientific phenomena and their relevance in day-to-day life.
PO3	Acquired the skills in handling scientific instruments, planning, and performing laboratory experiments. The skills of observations and drawing logical inferences from the scientific experiments.
PO4	Analyzed the given scientific data critically and systematically and the ability to draw objective conclusions.
PO5	Been able to think creatively (divergent and convergent) to propose novel ideas in explaining facts and figures or providing new solutions to problems.
PO6	Realized how developments in any science subject help develop other science subjects and vice-versa and how interdisciplinary approach helps provide better solutions and new ideas for sustainable outcomes.
PO7	Developed a scientific outlook concerning science subjects and all aspects related to life.
PO8	Realized that knowledge of subjects in other faculties such as humanities, performing arts, social sciences, etc., can have greatly and effectively influence, which inspires in evolving new scientific theories and inventions.
PO9	Imbined ethical, moral, and social values in personal and social life, leading to a highly cultured and civilized personality.
PO10	Developed various communication skills such as reading, listening, speaking, etc., which will help express ideas and views clearly and effectively.
PO11	Realized that pursuit of knowledge is a lifelong activity and in combination with untiring efforts and positive attitude and other necessary qualities leads towards a successful life.

Program Specific Outcomes (PSO)

On completing Masters in the M.Sc. in Computer Science Lateral Entry, the students shall be able to realize the following outcomes:

PSO	Description
PSO1	Communicate computer science concepts, designs, and solutions effectively and professionally
PSO2	Apply knowledge of computing to produce effective designs and solutions for specific problems
PSO3	Use software development tools, software systems, and modern computing platforms
PSO4	To have the knowledge and the ability to develop creative solutions
PSO5	To develop skills to learn new technology
PSO6	To develop critical reasoning
PSO7	To apply computer science theory and software development concepts to construct computing-based solutions
PSO8	To design and develop computer programs/computer-based systems in the area related to algorithms, networking, web design, cloud computing, Artificial Intelligence, Mobile applications
PSO9	The ability to understand, analyze and develop computer programs in the areas related to algorithms, system software, multimedia, web design, big data analytics, and networking for efficient design of computer-based systems of varying complexity
PSO10	The ability to understand the evolutionary changes in computing, apply standard practices and strategies in software project development using open-ended programming environments to deliver a quality product for business success, real-world problems, and meet the challenges of the future
PSO11	The ability to employ modern computer languages, environments, and platforms in creating innovative career paths to be an entrepreneur, lifelong learning and a zest for higher studies and also to act as a good citizen by inculcating in them moral values & ethics

Postgraduate Attributes

- Disciplinary Knowledge
- Creative & Critical Thinking
- Reasoning and Analytical abilities
- Logic/Discrete Mathematics knowledge
- Logical Thinking
- Problem analysis and solving abilities
- Life Skills
- Moral & Ethical Values
- Research Skills

Structure of Masters' Programme

Scheme for
M.Sc. Computer Science Lateral Entry (Semester I)
 Session: 2024-25
 Exam: Dec 2024

Semester I										
Course Code	Course Title	Code	Max. Marks		Total Marks	Min. Marks (%)	L	T	P*	Credits
			Int. Marks	Ext. Marks						
MLE6.5SD CT101	Basic Communication Skills or Seminar + Academic Writing	SDC				Non-CG PA S/NS	2	0	0	2
MLE6.5DC CT102	Data Structures using Python	DCC	30	80	150	36%	3	1	0	4

Objectives, Course-level Learning Outcomes, Contents, and Suggested Readings

Semester I

Paper Code: MLE6.5DCCT102

Paper Name: Data Structures using python

[\(See Scheme of Examination\)](#)

Course Objectives:

CO1. To examine Python syntax and semantics and apply Python flow control and functions.

CO2. To create, run and manipulate Python Programs using core data structures like Lists,

CO3. To apply Dictionaries and use Regular Expressions.

CO4. To interpret the concepts of Object-Oriented Programming as used in Python.

CO5. To master object-oriented programming to create an entire python project using objects and classes

Learning Outcomes:

After completing this course, students will be able to:

LO1. Examine Python syntax and semantics and apply Python flow control and functions.

LO2. Create, run and manipulate Python Programs using core data structures like Lists,

LO3. Apply Dictionaries and use Regular Expressions.

LO4. Interpret the concepts of Object-Oriented Programming as used in Python.

LO5. Master object-oriented programming to create an entire python project using objects and classes

Unit I

Python Basics: Python Interpreter, Comments, writing code in Jupyter Notebook/Google Colab, Indentation, importing a module, if-else statements, loops(while, for). Functions and returning values.

Unit II

Classes, Objects, Methods, Constructors. Python Specific Data Structures: List, Tuples, Set, Dictionaries, Comprehensions and its Types, Strings, slicing. Basic Exception Handling. Basic File Handling.

Unit III

Concept of Dynamic arrays and its implementation. Linked Lists: Implementation of Singly Linked Lists, Doubly Linked Lists, Circular Linked Lists.

Unit IV

Stacks: Overview of Stack, Implementation of Stack (List & Linked list), Applications of Stack
Queues: Overview of Queue, Implementation of Queue(List & Linked list), Applications of Queues, Priority Queues.

Unit V

Graphs: Introduction, Directed & Undirected Graphs, Weighted & Unweighted Graphs, Representations, Breadth First Search, Depth First Search. Trees: Overview of Trees, Tree Terminology, Binary Trees: Introduction, Implementation, Applications. Tree Traversals, Binary Search Trees: Introduction, Implementation, AVL Trees: Introduction, Rotations, Implementation.

TEXTBOOKS:

1. Data structures and algorithms in python by Michael T. Goodrich
2. Data Structures and Algorithmic Thinking with Python by Narasimha Karumanchi

Scheme of Examination (Theory)

Maximum Marks: 100 (80 External + 20 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (10 marks) shall contain 10 questions two from each Unit. Each question shall be of 1 mark. All the questions are compulsory. Section A will be prepared such that questions i through v are multiple-choice questions, while questions vi through x will be fill-in-the-blank questions. Section B (25 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 5 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (45 marks) shall contain 5 questions, one from each Unit. Each question shall be of 15 marks. The candidate is required to answer any three questions by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (10 marks), Seminar Presentation (6 marks) and Class Performance (4 marks).

Paper Code:MLE6.5DCCT103

Paper Name: Java

(See Scheme of Examination)

Course Objectives:

- CO1. To use an integrated development environment to write, compile, run, and test simple object-oriented Java programs.
- CO2. To read and make elementary modifications to Java programs that solve real-world problems.
- CO3. To validate input in a Java program.
- CO4. To identify and fix defects and common security **issues** in code.
- CO5. To document a Java program using Javadoc.
- CO6. To use a version control system to track source code in a project.

Learning Outcomes:

After completing this course, students will be able to:

- LO1. Use an integrated development environment to write, compile, run, and test simple object-oriented Java programs.
 - LO2. Read and make elementary modifications to Java programs that solve real-world problems.
 - LO3. Validate input in a Java program.
 - LO4. Identify and fix defects and common security issues in code.
 - LO5. Document a Java program using Javadoc.
 - LO6. Use a version control system to track source code in a project.
-

Unit I

Introduction to Java: evolution, features, comparison with C and C++; Java program structure; tokens, keywords, constants, variables, data types, typecasting, statements, Operators and Expression; Conditional Statements and Loop Statements.

Unit II

Class: syntax, instance variable, class variables, methods, constructors, overloading. Arrays, Strings and Vectors, Packages and Interfaces, visibility controls

Unit III

Inheritance: types of inheritance, use of super, method overriding, final class, abstract class, wrapper classes.

Unit IV

Errors and Exceptions: Types of errors, Exception classes, Exception handling in java, use of try, catch, finally, throw and throws. Taking user input, Command line arguments.

Unit V

Multithreaded Programming: Creating Threads, the Life cycle of thread, Thread priority, Thread synchronization, Inter-thread communication, Implementing the Runnable Interface.

Scheme of Examination (Theory)

Maximum Marks: 100 (80 External + 20 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (10 marks) shall contain 10 questions two from each Unit. Each question shall be of 1 mark. All the questions are compulsory. Section A will be prepared such that questions i through v are multiple-choice questions, while questions vi through x will be fill-in-the-blank questions. Section B (25 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 5 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (45 marks) shall contain 5 questions, one from each Unit. Each question shall be of 15 marks. The candidate is required to answer any three questions by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (10 marks), Seminar Presentation (6 marks) and Class Performance (4 marks).

Recommended Readings

1. The Complete reference Java Ninth Edition By Herbert Schildt (Tata McGraw Hill)
2. Beginning Programming with Java For Dummies by Burd, For Dummies; 3 edition

Suggested Readings

3. Java: A Beginner's Guide, Sixth Edition: A Beginner's Guide by Herbert Schildt, McGraw-Hill Osborne Media Programming in JAVA By E. Balagurusamy (TMH)
4. JAVA 2 programming Black Book By Steven Holzner et al. (Dreamtech Press)
5. Programming in JAVA By E. Balagurusamy (TMH)

Paper Code:MLEDCCT104a

Paper Name: Software Engineering & Research Methodology

(See Scheme of Examination)

Course Objectives:

- CO1. To learn the phases of software development
- CO2. To develop process models and process systems multiple collections, models
- CO3. To gather, understand, analyze and specify requirements
- CO4. To develop architectural diagram, and implement by following coding principles
- CO5. To apply testing strategies and handle software product maintenance issues
- CO6. To get a good knowledge of the issues and challenges faced while doing the Software project Management.
- CO7. To understand why the majority of the software projects fail and how that failure probability can be reduced effectively.
- CO8. To do the Project Scheduling, tracking, Risk analysis, Quality management, and Project Cost estimation using different techniques.
- CO9. To identify and discuss the role and importance of research in the social sciences.
- CO10. To identify and discuss the issues and concepts salient to the research process.
- CO11. To identify and discuss the complex issues inherent in selecting a research problem, selecting an appropriate research design, and implementing a research project.
- CO12. To identify and discuss the concepts and procedures of sampling, data collection, analysis, and reporting.

Learning Outcomes:

After completing this course, students will be able to:

- LO1. Learn the phases of software development
 - LO2. Develop process models and process systems multiple collections, models
 - LO3. Gather, understand, analyze and specify requirements
 - LO4. Develop architectural diagram, and implement by following coding principles
 - LO5. Apply testing strategies and handle software product maintenance issues
 - LO6. Get a good knowledge of the issues and challenges faced while doing the Software project Management.
 - LO7. To understand why the majority of the software projects fail and how that failure probability can be reduced effectively.
 - LO8. To do the Project Scheduling, tracking, Risk analysis, Quality management, and Project Cost estimation using different techniques.
 - LO9. Identify and discuss the role and importance of research in the social sciences.
 - LO10. Identify and discuss the issues and concepts salient to the research process.
 - LO11. Identify and discuss the complex issues inherent in selecting a research problem, selecting an appropriate research design, and implementing a research project.
 - LO12. identify and discuss the concepts and procedures of sampling, data collection, analysis, and reporting.
-

Unit I

Software: Software Characteristics, Software Process, Process Characteristics, **Software Process Model:** Linear Sequential Model, Prototyping Model, Spiral Model, Software Quality, McCall's Quality Factors,

Unit II

Software Requirement Analysis and Specification (SRS): Need Characteristics and Components.

Unit III

Planning a Software Project: COCOMO Model, Project Monitoring Plan, and Risk Management. **Design Principle:** Abstraction, Modularity, Cohesion and Coupling,

Unit IV

Software Management: Size Oriented Metrics, Function Oriented Metrics. **Testing:** Testing Fundamental, Functional Testing (Black Box), Structural Testing (White Box), Alpha And Beta Testing, **Testing Process:** Comparison of Different Testing, Level of Testing.

Unit V

Research Methodology: Meaning of Research, Objective of Research, Types of Research, Research Approaches, Significance of research, Research Methods versus Methodology, Research Process, Criteria of Good Research, What is Research Problem, Selecting the problem, Necessity of defining the problem, Technique involved in defining a problem.

Instructions for Examination (Theory)

Maximum Marks: 150 (120 External + 30 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (20 marks) shall contain 10 questions two from each Unit. Each question shall be of 2 marks. All the questions are compulsory. Section A will be prepared such that questions i through v are multiple-choice questions, while questions vi through x will be fill-in-the-blank questions. Section B (40 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 8 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (60 marks) shall contain 5 questions, one from each Unit. Each question shall be of 20 marks. The candidate is required to answer any three questions by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (15 marks), Seminar Presentation (10 marks) and Class Performance (5 marks).

Recommended Readings

1. Software Engineering: A Practitioner's Approach By Roger S. Pressman, McGraw Hill.

Suggested Readings

2. Software Engineering: A Precise Approach by Pankaj Jalote, Wiley Precise textbook Series
3. Research Methodology Methods and Techniques by C. R. Kothari, New Age International Publisher

Paper Code:MLE6.5DCCT104(b)
Paper Name: Artificial Intelligence
(See Scheme of Examination)

Course Objectives:

- CO1. To analyze and formalize the problem as a state space, graph, design heuristics
- CO2. To have the ability to represent solutions for various real-life problem domains using logic-based techniques
- CO3. To understand the numerous applications and huge possibilities in the field of AI
- CO4. To ability to express ideas in AI research and programming language related to emerging technology.

Learning Outcomes:

After completing this course, students will be able to:

- LO1. To analyze and formalize the problem as a state space, graph, design heuristics
- LO2. Ability to represent solutions for various real-life problem domains using logic-based techniques
- LO3. Understand the numerous applications and huge possibilities in the field of AI
- LO4. Ability to express ideas in AI research and programming language related to emerging technology.

Unit I

Definition, History, Agents, and environment, Defining the problem as a state and space search, What is Intelligence? Types of Intelligence, Difference between Human and Machine Intelligence, The Structure of Intelligent Agents. Solving problems by searching: Uninformed search strategies- Brute-Force, Breadth-First, Uniform-cost search Depth-First, Depth-limited search,depth-first search, Bidirectional search.

Unit II

Informed (heuristic) search strategies- Greedy best-first search, A*, AO* Memory-bounded heuristic search. Heuristic functions, local search algorithms- Hill-climbing search, Simulated annealing, Local beam search.

Unit III

Knowledge-Based System: Knowledge, Procedure V/S Declarative Knowledge, Knowledge Representation: Using Procedural and Predicate Logic, Inference in First-order logic: Unification and Lifting, Forward Chaining, Backward Chaining, Resolution. Rule-based System, Frames, Scripts, and Semantic Nets.

Unit IV

Probabilistic Reasoning, Probability, and Bayes Theorem represent knowledge in the uncertain domain, Certainty factors, Bayesian Networks, Dempster–Shafer theory, introduction to Fuzzy logic. Learning: types of learning, decision trees.

Unit V

Expert System: types, architecture. Introduction to Artificial Neural Networks, Reinforcement Learning, Natural Language Processing, Pattern Recognition, and Perception.

Instructions for Examination (Theory)

Maximum Marks: 150 (120 External + 30 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (20 marks) shall contain 10 questions two from each Unit. Each question shall be of 2 marks. All the questions are compulsory. Section A will be prepared such that questions i through v are

multiple-choice questions, while questions vi through x will be fill-in-the-blank questions. Section B (40 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 8 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (60 marks) shall contain 5 questions, one from each Unit. Each question shall be of 20 marks. The candidate is required to answer any three questions by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (15 marks), Seminar Presentation (10 marks) and Class Performance (5 marks).

Recommended Readings

1. Artificial Intelligence By Rich And Knight (Tata McGraw Hill)

Suggested Readings

2. Introduction to Artificial Intelligence and Expert Systems By Patterson (Prentice-Hall India)
3. Artificial Intelligence A Modern Approach by Russell and Norvig, Prentice Hall

Paper Code:MLE6.5DCCT104(c)

Paper Name: Theory of Computation

(See Scheme of Examination)

Course Objectives:

- CO1. able to design Finite Automata machines for given problems;
- CO2. able to analyze a given Finite Automata machine and find out its Language;
- CO3. able to create Pushdown Automata machine for given CF language(s);
- CO4. able to generate the strings/sentences of given context-free languages using its grammar;
- CO5. Able to design Turing machines for given Apply to identify Interpretational problem.

Learning Outcomes:

After completing this course, students will be able to identify.:

- LO1. able to design Finite Automata machines for given problems;
 - LO2. able to analyze a given Finite Automata machine and find out its Language;
 - LO3. able to create Pushdown Automata machine for given CF language(s);
 - LO4. able to generate the strings/sentences of given context-free languages using its grammar;
 - LO5. Able to design Turing machines for given Apply to identify Interpretational problem.
-

Unit I

Languages: Alphabets, string, language, Basic Operations on language, Concatenation, Kleene Star. Finite Automata and Regular Languages: Regular Expressions, Transition Graphs, Deterministic and non-deterministic finite automata, NFA to DFA Conversion, Regular languages and their relationship with finite automata, Pumping lemma and closure properties of regular languages.

Unit II

Context-free languages: Context-free grammars, parse trees, ambiguities in grammars and languages, Pushdown automata (Deterministic and Non-deterministic), Pumping Lemma, Properties of context-free languages, normal forms.

Unit III

Turing Machines and Models of Computations: RAM, Turing Machine as a model of computation, Universal Turing Machine, Language acceptability, decidability, halting problem, Recursively enumerable and recursive languages, unsolvability problems.

Recommended Readings

1. Daniel I.A., Cohen, Introduction to computer theory, John Wiley.
2. Lewis & Papadimitriou, Elements of the theory of computation, PHI.

Suggested Readings

1. Hopcroft, Aho, Ullman, Introduction to Automata Theory, Language & Computation, Pearson Education.
2. P. Linz, An Introduction to Formal Language and Automata, 4th edition Jones Bartlett Publication .

Paper Code:MLE6.5DCCT105(A)

Paper Name: Data Analysis Using R

(See Scheme of Examination)

Course Objectives:

CO1. To understand the basics of R programming in terms of constructs, control statements, string Functions.

CO2. To understand the use of R for Data analytics.

CO3. To conduct your independent data analysis.

CO4. To be able to appreciate and to apply the R programming from a statistical perspective.

CO5. To use R Studio for interactive computation

CO6. To practice different features of R for the given problem

CO7. To use different libraries of R

CO8. To get acquainted with application of R

Learning Outcomes:

After completing this course, students will be able to:

CO1. To learn the basics of R programming in terms of constructs, control statements, string Functions.

CO2. To learn the use of R for Data analytics.

CO3. To learn how to conduct your independent data analysis.

CO4. To appreciate and to apply the R programming from a statistical perspective.

CO5. To learn how to use R Studio for interactive computation

CO6. To learn how to practice different features of R for the given problem

CO7. To learn how to use different libraries of R

CO8. Get acquainted with application of R

Unit I

Foundations for data analysis-matrices, the notion of probability, the concept of random variables and various distributions, mean, variance, covariance, normal distributions, an overview of sampling, hypothesis testing, confidence interval, the concept of optimization.

Unit II

Installation of R, data editing, use of R as a calculator; functions, and assignments. matrix operations, logical operators, Conditional executions and loops.

Unit III

Data management with sequences, repeats, sorting and ordering, lists, vector indexing, factors; display and formatting of strings.

Unit IV

Working with data frames, Importing data files; Graphics and plots. Simple Case studies.

Unit V

Basic statistical functions for central tendency, variation, box plots, skewness and kurtosis, correlations; overview of using R functions for simple hypothesis testing, Applications of R.

Scheme of Examination (Theory)

Maximum Marks: 100 (80 External + 20 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (10 marks) shall contain 10 questions two from each Unit. Each question shall be of 1 mark. All the

questions are compulsory. Section A will be prepared such that questions i through v are multiple-choice questions, while questions vi through x will be fill-in-the-blank questions. Section B (25 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 5 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (45 marks) shall contain 5 questions, one from each Unit. Each question shall be of 15 marks. The candidate is required to answer any three questions by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (10 marks), Seminar Presentation (6 marks) and Class Performance (4 marks).

Recommended Readings

1. Hands-On Programming with R, Garrett Grolemund, O'Reilly Publishers.
2. R for Beginner - https://cran.r-project.org/doc/contrib/Paradis-rdebuts_en.pdf

Suggested Readings

3. A Learning Guide to R
https://www.westernsydney.edu.au/_data/assets/pdf_file/0011/830909/Rnotes_20180905_web.pdf
4. Applied Statistics And Probability For Engineers – by Douglas Montgomery, John Wiley & Sons Inc.
5. Research Methodology: Methods And Techniques, C.R. Kothari, New Age International Publishers.
6. Design and Analysis of Experiments (Wiley India), Montgomery, Douglas C.

Paper Code:MLE6.5DCCT105(B)

Paper Name : Introduction to LaTeX

(See Scheme of Examination)

Course Objectives:

CO1. To understand the concept of scientific writing.

CO2. To understand about working with text, images, tables, references etc in LaTeX.

Learning Outcomes:

After completing this course, students will be able to:

LO1. To understand the concept of scientific writing.

LO2. To understand about working with text, images, tables, references etc in LaTeX.

Unit I

Installation of the software LaTeX, Using any online LaTeX editor like Overleaf ; Preparing and compiling a LaTeX input file, LaTeX syntax: Commands, Packages, Keyboard characters in LaTeX. Fonts Selection: Text-mode fonts, Math-mode fonts, Colored fonts.

Unit II

Texts Formatting: Sectional units, Labeling and referring numbered items, Quoted texts, New lines and paragraphs, Creating and filling blank space, Producing dashes within texts, Foot notes

Unit III

Listing Texts: Numbered and Unnumbered listing, Listing with user-defined labels; Tabbing Texts; Table Preparation: Table through tabular and tabularx environment, Vertical positioning of tables, Merging rows and columns of tables, Tables in multi-column documents, Tables at the end of a document.

Unit IV

Figure Insertion: Inserting simple figures, Sub-numbering a group of figures, Figures in multi-column documents, Figures at the end of a document. Equations: Basic notations and delimiters, Mathematical operators, Mathematical expressions in text-mode, Simple equations, Array of equations.

Unit V

Bibliography with BIBTEX: Preparation of BIBTEX compatible reference database, Standard bibliographic styles of LaTeX. Article Preparation: List of authors, Title and abstract on separate pages, Articles in multiple columns. Slide Preparation: Frames and Sectional units in presentation, Appearance of a presentation (BEAMER themes).

Scheme of Examination (Theory)

Maximum Marks: 100 (80 External + 20 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (10 marks) shall contain 10 questions two from each Unit. Each question shall be of 1 mark. All the questions are compulsory. Section A will be prepared such that questions i through v are multiple-choice questions, while questions vi through x will be fill-in-the-blank questions. Section B (25 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 5 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (45 marks) shall contain 5 questions, one from each Unit. Each question shall be of 15 marks. The candidate is required to answer any three questions by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (10 marks), Seminar Presentation (6 marks) and Class Performance (4 marks).

Recommended Readings

1. Leslie Lamport, LaTeX: A Document Preparation System, Addison- Wesley.

Suggested Readings

2. Stefan Kottwitz, LaTeX Beginner's Guide, Packt Publishing Limited.
3. Tobias Oetiker, Hubert Partl, Irene Hyna, and Elisabeth Schegle, The Not So Short Introduction to LaTeX 2e, <https://tobi.oetiker.ch/lshort/lshort-a5book.pdf>, 2014.
4. LaTeX in 24 hours ([Link](#))

Semester II

Paper Code:MLE6.5DCCT202a

Paper Name : **Cloud Computing**

[\(See Scheme of Examination\)](#)

Objective – After completing this course the student will have an understanding of key aspects of cloud computing

Unit I

Introduction to Cloud Computing, Services provided by cloud-SaaS, PaaS, IaaS, DaaS etc. Functioning of cloud computing, Advantages, Disadvantages, Applications, Cloud Service Providers- Amazon AWS, Google App Engine, Microsoft, VMware.

Unit II

Virtualization concepts, Objectives, Types of Virtualization & its benefits, Introduction to Various Virtualization OS (Hypervisor). Virtualization for Enterprises

Unit III

Designing and Implementing a Data Center-Based Cloud, Industry and International Standards for Cloud Implementation, Building private cloud using open source tools, Integration of Public and Private Cloud.

Unit IV

Private, Public & Hybrid Clouds, their Advantages & Disadvantages, On-Premises, and Off-Premises Cloud services, installing a Cloud service.

Unit V

Cloud Security issues - Infrastructure Security, Network level security, Host level security, Application-level security, Data privacy and security Issues, Jurisdictional issues raised by Data location, Access Control, Trust, Reputation, Risk and Authentication in cloud computing

Scheme of Examination (Theory)

Maximum Marks: 100 (80 External + 20 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (10 marks) shall contain 10 questions two from each Unit. Each question shall be of 1 mark. All the questions are compulsory. Section A will be prepared such that questions i through v are multiple-choice questions, while questions vi through x will be fill-in-the-blank questions. Section B (25 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 5 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (45 marks) shall contain 5 questions, one from each Unit. Each question shall be of 15 marks. The candidate is required to answer any three questions by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (10 marks), Seminar Presentation (6 marks) and Class Performance (4 marks).

Recommended Readings

1. Cloud Computing Concepts Technology and Architecture by Thomas Erl, Prentice Hall
2. Cloud Computing Principles and paradigms by Rajkumar Buyya, James Broberg and Andrzej Goscinski, John Wiley and Sons, Inc. Publication
3. Cloud Computing Theory and Practice by Dan C. Marinescu, Morgan Kaufman Publication

Course Objectives:

- CO1. To understand the definition and significance of the Internet of Things
- CO2. To discuss the architecture, operation, and business benefits of an IoT solution
- CO3. To examine the potential business opportunities that IoT can uncover
- CO4. To explore the relationship between IoT, cloud computing, and big data
- CO5. To identify how IoT differs from traditional data collection systems
- CO6. To understand the definition and significance of the Internet of Things
- CO7. To discuss the architecture, operation, and business benefits of an IoT solution
- CO8. To examine the potential business opportunities that IoT can uncover
- CO9. To explore the relationship between IoT, cloud computing, and big data
- CO10. To identify how IoT differs from traditional data collection systems.

Learning Outcomes:

After completing this course, students will be able to:

- LO1. Understand the definition and significance of the Internet of Things
- LO2. Discuss the architecture, operation, and business benefits of an IoT solution
- LO3. Examine the potential business opportunities that IoT can uncover
- LO4. Explore the relationship between IoT, cloud computing, and big data
- LO5. Identify how IoT differs from traditional data collection systems
- LO6. Understand the definition and significance of the Internet of Things
- LO7. Discuss the architecture, operation, and business benefits of an IoT solution
- LO8. Examine the potential business opportunities that IoT can uncover
- LO9. Explore the relationship between IoT, cloud computing, and big data
- LO10. Identify how IoT differs from traditional data collection systems.

Unit I

M2M to IoT: Introduction, Market Perspective, Architectural Overview. M2M to IoT Technology- Devices and gateways, Local and wide area networking, Data management, Business processes in IoT, IoT analytics, Knowledge management, IOT Architecture, Architecture Reference Model, Real-world design constraints.

Unit II

IoT Use Cases- Asset Management, **Industrial Automation-** Service-oriented architecture-based device integration, SOCRATES: realizing the enterprise integrated Web of Things, IMC-AESOP: from the Web of Things to the Cloud of Things,

Unit III

Commercial Building Automation- Introduction, Case study: phase one-commercial building automation today, Case study: phase two- commercial building automation in the future.

Unit IV

Internet of Things Privacy, Security and Governance Introduction, Overview of Governance, Privacy and Security Issues, Contribution from FP7 Projects, Security,

Unit V

IoT and Smart Cities, Privacy and Trust in IoT-Data-Platforms for Smart Cities, First Steps Towards a Secure Platform, Smartie Approach. Data Aggregation for the IoT in Smart Cities, Security

Scheme of Examination (Theory)

Maximum Marks: 100 (80 External + 20 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (10 marks) shall contain 10 questions two from each Unit. Each question shall be of 1 mark. All the questions are compulsory. Section A will be prepared such that questions i through v are multiple-choice questions, while questions vi through x will be fill-in-the-blank questions. Section B (25 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 5 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (45 marks) shall contain 5 questions, one from each Unit. Each question shall be of 15 marks. The candidate is required to answer any three questions by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (10 marks), Seminar Presentation (6 marks) and Class Performance (4 marks).

Recommended Readings

1. From Machine-to-Machine to the Internet of Things: Introduction to a New Age of Intelligence by Jan Holler, Vlasios Tsiatsis, Catherine Mulligan, Stefan Avesand, Stamatios Karnouskos, David Boyle, 1st Edition, Academic Press, 2014.
2. Internet of Things (A Hands-on-Approach) by Vijay Madisetti and Arshdeep Bahga, 1st Edition, VPT, 2014.
3. Rethinking the Internet of Things: A Scalable Approach to Connecting Everything by Francis daCosta, 1st Edition, Apress Publications, 2013

Suggested Readings

4. Designing the Internet of Things, Adrian McEwen (Author), Hakim Cassimally
5. Internet of Things: Converging Technologies for Smart Environments and Integrated Ecosystems by Dr. Ovidiu Vermesan, Dr. Peter Friess, River Publishers
6. Internet of Things (A Hands-on-Approach), Vijay Madisetti, Arshdeep Bahga
7. Building the internet of things with ipv6 and mipv6, The Evolving World of M2M Communications, Daniel Minoli John Wiley & Sons

Paper Code:MCSLE6.5DCCT202c

Paper Name: **Android Programming**

(See Scheme of Examination)

Course Objectives:

- CO1. To create an android project from XML Layout.
- CO2. To debug Android apps and create UI fragments
- CO3. To pass data between fragments
- CO4. To design apps with audio playback.
- CO5. To create a database and communicate with mobile apps
- CO6. To install and configure Android application development tools
- CO7. To design and develop user interfaces for the Android platform.
- CO8. To save state information across important operating system events.
- CO9. To apply Java programming concepts to Android application development.
- CO10. To develop the ability to develop Android Application

Learning Outcomes:

After completing this course, students will be able to:

- LO1. Create an android project from XML Layout.
- LO2. Debug Android apps and create UI fragments
- LO3. Pass data between fragments
- LO4. Design apps with audio playback.
- LO5. Create database and communicate with mobile apps
- LO6. Install and configure Android application development tools.
- LO7. Design and develop user interfaces for the Android platform.
- LO8. Save state information across important operating system events.
- LO9. Apply Java programming concepts to Android application development.
- LO10. Develop the ability to develop Android Application

Unit-I

Android Introduction- What is Android?, History and Version, Android Architecture, Android Emulator, Install Android, Setup Android Studio, Introduction to Gradle, What is Context in Android? First Android App, Application Components, AndroidManifest.xml, MainActivity.java, activity_main.xml, R.java, Hide Title Bar, Screen Orientation.

Unit-II

UI Layouts- Linear Layout, Relative Layout, Table Layout, Absolute Layout, Frame Layout. UI Controls- TextView, EditText, AutoCompleteTextView, Button, ImageButton, Checkbox, ToggleButton, RadioButton, RadioGroup, ProgressBar, Spinner, TimePicker, DatePicker. ListView, GridView, WebView, Vertical ScrollView, Horizontal ScrollView, ImageSlider. Event Handling.

Unit-III

Activity and Intents- Activity LifeCycle, Implicit Intent, Explicit Intent, Share App Data. BroadcastReceiver, Notifications, Fragments, Android Menu- Option Menu, Context Menu, Popup Menu. Android Service, Android AlarmManager, Android Storage, Toast, Custom Toast, Spinner.

Unit-IV

Android SQLite- Database Creation, Insertion, Deletion, Updation and Fetching Data. XML Parsing and JSON Parsing.

Android Multimedia- MediaPlayer, VideoView, Recording Media. Android Speech

Unit-V

Android Telephony- TelephonyManager, Get Call State, Simple Caller Talker, Phone Call, Send SMS, Send Email

Android Device- Bluetooth, List Paired Devices, WIFI. Camera, Sensor, Graphics, Animation, Working with Google Maps.

Scheme of Examination (Theory)

Maximum Marks: 100 (80 External + 20 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (10 marks) shall contain 10 questions two from each Unit. Each question shall be of 1 mark. Section B (25 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 5 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (45 marks) shall contain 5 questions, one from each Unit. Each question shall be of 15 marks. The candidate is required to answer any three questions by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (10 marks), Seminar Presentation (6 marks) and Class Performance (4 marks).

Recommended Readings

Android Programming for Beginners by John Horton Publisher: Packt Publishing

Learn Java for Android Development (2nd edition) by Jeff Friesen Publisher: Apress

Suggested Readings

Android application development for java programmers. By James C. Sheusi. Publisher: Cengage Learning, 2013.

Beginning Android Programming with Android Studio, Fourth Edition by Jerome F. DiMarzio Publisher: John Wiley & Sons

Android Programming: The Big Nerd Ranch Guide by Kristin Marsicano, Chris Stewart, Bill Phillips Publisher: Big Nerd Ranch Guides

Paper Code:MLE6.5DCCT202d

Paper Name: Introduction to Cyber Security

(See Scheme of Examination)

Course Objectives:

CO1. To identify and classify various attacks

CO2. To encrypt and decrypt messages using block chippers and signs.

CO3. To create a digital signature using multiple algorithms.

CO4. To describe web security, intruders, viruses, and firewalls

Learning Outcomes:

After completing this course, students will be able to-

LO1. Identify and classify various attacks

LO2. Encrypt and decrypt messages using block chippers and signs.

LO3. Create a digital signature using multiple algorithms.

LO4. Describe web security, intruders, viruses, and firewalls

Unit I

Basics: Linux/Mac Terminal and Commands, Basic Computer Terminology, Computer Security models, Computer Security Terms, Computer Ethics, Business, and Professional Ethics, Need for cyber security, Cyber Frauds and crimes, Digital Payments, Various Search Engines

Unit II

Introduction to Auditing, Deep Web, VAPT, Smartphone Operating systems, introduction to compliances, Globalization and borderless world.

Unit III

Basic Python Scripting: Python Basics, Variables and Types, Lists, Basic Operators, String Formatting, Basic String Operations, Conditions, Loops, Functions, Classes and Objects, Dictionaries, Modules, and Packages.

Unit IV

Cyber Laws: Need for Cyber Regulations; Scope and Significance of Cyber laws: Information Technology Act 2000; Network and Network Security, Access and Unauthorised Access, Data Security,

Unit V

E Contracts and E Forms. Penal Provisions for Phishing, Spam, Virus, Worms, Malware, Hacking, Trespass, and Stalking; Human rights in cyberspace, International Co-operation in investigating cybercrimes.

Scheme of Examination (Theory)

Maximum Marks: 100 (80 External + 20 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (10 marks) shall contain 10 questions two from each Unit. Each question shall be of 1 mark. Section B (25 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 5 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (45 marks) shall contain 5 questions, one from each Unit. Each question shall be of 15 marks. The candidate is required to answer any three questions by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (10 marks), Seminar Presentation (6 marks) and Class Performance (4 marks).

Recommended Readings

1. Behrouz A. Forouzan (2004). Data communication and Networking. Tata McGraw-Hill.
2. Kurose, James F. & Ross, Keith W. (2003). Computer Networking: A Top-Down Approach Featuring the Internet (3rd Ed.). Pearson Education.
3. Langtangen, H.P. (2012). Python Scripting for Computational Science (4th Ed.). Springer
4. Craig, B. (2012). Cyber Law: The Law of the Internet and Information Technology. Pearson. Sharma J. P. & Kanojia S. (2016). Cyber Laws. New Delhi: Ane Books Pvt Ltd.
5. Paintal, D. Law of Information Technology. New Delhi: Taxmann Publications Pvt. Ltd

Suggested Readings

1. Shema, M. (2012). Hacking Web Apps: Detecting and Preventing Web Application Security Problems.
2. <https://uou.ac.in/sites/default/files/slm/Introduction-cyber-security.pdf>
3. Computer Programming And Cyber Security for Beginners: This Book Includes: Python Machine Learning, SQL, Linux, Hacking with Kali Linux, Ethical Hacking. Coding and Cybersecurity Fundamentals, Zach Codings, Independently published

Paper Code:MLE6.5DCCT203a

Paper Name: **Big Data & Data Mining**

(See Scheme of Examination)

Course Objectives:

CO1. To explain characteristics and use cases and applications of Big Data

CO2. To develop MapReduce operation using Hadoop

CO3. To be able to understand the role of Virtualization Technologies

CO4. To design and implement systems for data mining.

CO5. To evaluate the performance of different data-mining algorithms.

CO6. To propose data-mining solutions for various applications.

Learning Outcomes:

After completing this course, students will be able to:

LO1. Explain characteristics and use cases and applications of Big Data

LO2. Develop MapReduce operation using Hadoop

LO3. Ability to understand the role of Virtualization Technologies

LO4. design and implement systems for data mining.

LO5. Evaluate the performance of different data-mining algorithms.

LO6. Propose data-mining solutions for various applications.

Unit I

Big data: Definition and Characteristics(The 5 Vs), various technologies and applications. Data mining: Definition, tasks, Data mining as a step of the Knowledge discovery process, Applications; Data objects and types of attributes, Recalling mean, median, mode, and weighted arithmetic mean, Data quality.

Unit II

Overview of data preprocessing, Classification analysis- definition, Overview of various classification techniques;

Decision tree induction- working, examples, specifying attribute test conditions.

Unit III

Measures of node impurity, measures for selecting best split; Evaluating the performance of a classifier- Holdout method, Random subsampling, cross-validation, Bootstrap.

Unit IV

Association analysis: support, confidence, association rules, Frequent Itemsets; Frequent itemset generation - Apriori principle, Apriori algorithm, and examples.

Unit V

FP growth algorithm and examples; Closed and maximal frequent itemsets. Cluster analysis: Definition, an overview of basic clustering methods, Density-based methods-DBSCAN.

Scheme of Examination (Theory)

Maximum Marks: 100 (80 External + 20 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (10 marks) shall contain 10 questions two from each Unit. Each question shall be of 1 mark. All the questions are compulsory. Section A will be prepared such that questions i through v are multiple-choice questions, while questions vi through x will be fill-in-the-blank questions.

Section B (25 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 5 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (45 marks) shall contain 5 questions, one from each Unit. Each question shall be of 15 marks. The candidate is required to answer any three questions by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (10 marks), Seminar Presentation (6 marks) and Class Performance (4 marks).

Recommended Readings

1. Data Mining: Concepts and Techniques, 3rd edition, Jiawei Han and Micheline Kamber
2. Introduction to Data Mining, Pang-Ning Tan, Michael Steinbach, Vipin Kumar, Pearson Education.

Suggested Readings

3. Data Mining: A Tutorial Based Primer, Richard Roiger, Michael Geatz, Pearson Education 2003.
4. Introduction to Data Mining with Case Studies, G.K. Gupta, PHI 2006
5. Insight into Data mining: Theory and Practice, Soman K. P., DiwakarShyam, Ajay V., PHI 2006
6. Data Mining:: Practical Machine Learning Tools and Techniques (Morgan Kaufmann Series in Data Management Systems) by Witten, Frank, Hall

Paper Code: MLE6.5DCCT203b

Paper Name: Computer Graphics & Multimedia

(See Scheme of Examination)

Course Objectives:

- CO1. To develop line and circle generation algorithms
- CO2. To apply 2D and 3D transformations
- CO3. To develop clipping algorithms for point, line, and polygons
- CO4. To learn the concepts of projections, viewing, and graphics pipeline
- CO5. To create a simple animation and interaction for multimedia presentation
- CO6. To understand image types and color models
- CO7. To describe the concepts regarding the digitization of audio signals
- CO8. To compress images, videos, and audios using data compression methods
- CO9. To encode videos and audios using MPEG
- CO10. To ExplainfunctionalIdentify the core concepts of computer graphics, including viewing, projection, perspective, modeling, and transformation in two and three dimensions.
- CO11. To apply the concepts of color models, lighting and shading models, textures, ray tracing, hidden surface elimination, anti-aliasing, and rendering.
- CO12. To interpret the mathematical foundation of the concepts of computer graphics.
- CO13. To describe the fundamentals of animation, parametric curves, and surfaces, and spotlighting.
- CO14. To identify a typical graphics pipeline and apply graphics programming techniques to design and create computer graphics.
- CO15. To create effective OpenGL programs to solve graphics programming issues, including 3D transformation, object modeling, color modeling, lighting, textures, and ray tracing.
- CO16. To understand multimedia concerning any applications, including business, schools, home, education, and virtual reality.
- CO17. To understand the hardware and software needed to create projects using creativity and organization to create them.
- CO18. To develop multimedia skills to be the principal player of individual multimedia teams in developing projects.
- CO19. To work with all aspects of images.
- CO20. To work with all aspects of sound.
- CO21. To work with all aspects of the video.
- CO22. To learn copyright laws associated with multimedia.
- CO23. To learn the cost involved in multimedia planning, designing, and producing.
- CO24. To learn ways to present their multimedia projects.

Learning Outcomes:

After completing this course, students will be able to:

- LO1. Develop line and circle generation algorithms
- LO2. Apply 2D and 3D transformations
- LO3. Develop clipping algorithms for point, line, and polygons
- LO4. Learn the concepts of projections, viewing, and graphics pipeline
- LO5. Create a simple animation and interaction for multimedia presentation
- LO6. Understand image types and color models
- LO7. Describe the concepts regarding the digitization of audio signals
- LO8. Compress images, videos, and audios using data compression methods
- LO9. Encode videos and audios using MPEG
- LO10. ExplainfunctionalIdentify the core concepts of computer graphics, including viewing, projection, perspective, modeling, and transformation in two and three dimensions.
- LO11. apply the concepts of color models, lighting and shading models, textures, ray tracing, hidden surface elimination, anti-aliasing, and rendering.
- LO12. interpret the mathematical foundation of the concepts of computer graphics.
- LO13. Describe the fundamentals of animation, parametric curves, and surfaces, and spotlighting.
- LO14. Identify a typical graphics pipeline and apply graphics programming techniques to design and create computer graphics.

- LO15. Create effective OpenGL programs to solve graphics programming issues, including 3D transformation, object modeling, color modeling, lighting, textures, and ray tracing.
- LO16. Students will understand multimedia concerning any applications, including business, schools, home, education, and virtual reality.
- LO17. Students will understand the hardware and software needed to create projects using creativity and organization to create them.
- LO18. The student will develop multimedia skills to be the principal player of individual multimedia teams in developing projects.
- LO19. Students will work with all aspects of images.
- LO20. Students will work with all aspects of sound.
- LO21. Students will work with all aspects of the video.
- LO22. Students will learn copyright laws associated with multimedia.
- LO23. Students will learn the cost involved in multimedia planning, designing, and producing.
- LO24. Students will learn ways to present their multimedia projects.

Unit I

Basic elements of Computer Graphics, Graphics display devices, Applications of Computer Graphics, Raster and random scan; Color Models: RGB, CMY, HSV; Graphics Standard: OpenGL; Scan Conversion: DDA line algorithm, Midpoint circle Algorithm.

Unit II

2D Transformation: Translation, Rotation, Scaling, Homogeneous Coordinates and Matrix Representation of 2D Transformation, Composite Transformation. 3D Graphics: Matrix Representation of 3D transformations, Translation, Rotation, Scaling, Composite Transformation.

Unit III

Overview of concepts: Clipping, orthographic and parallel projection, hidden surface removal, lighting, transparency, modeling and texturing, rendering; Animations: Principles of animations, keyframing, the concept of 2D and 3D animation.

Unit IV

Blender: GUI Interface, Selecting, rotating, and Translating Objects, Using Snap to move objects precisely, Creating mesh primitives and extrusions, Subdividing meshes, Creating a simple creature, Joining mesh objects and stitching vertices, Organizing a scene with layers, groups, and hierarchies, Assigning glossy and reflective materials to objects, Creating bump maps

Unit V

Creating sky and ambient light, Understanding ambient occlusion, Adding motion blur and depth of field, Editing animation in the Graph Editor, Building and animating a simple character.

Scheme of Examination (Theory)

Maximum Marks: 100 (80 External + 20 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (10 marks) shall contain 10 questions two from each Unit. Each question shall be of 1 mark. All the questions are compulsory. Section A will be prepared such that questions i through v are multiple-choice questions, while questions vi through x will be fill-in-the-blank questions. Section B (25 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 5 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (45 marks) shall contain 5 questions, one from each Unit. Each question shall be of 15 marks. The candidate is required to answer any three questions

by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (10 marks), Seminar Presentation (6 marks) and Class Performance (4 marks).

Recommended Readings

1. Computer Graphics (Principles and Practice) by Foley, van Dam, Feiner, and Hughes, Addison Wesley (Indian Edition)
2. Computer Graphics by D Hearn and PM Baker, Prentice Hall of India (Indian Edition).

Suggested Readings

3. Mathematical Elements for Computer Graphics by DF Roger.
4. Introduction to Computer Graphics By Krishnamurthy N (Tata McGraw Hill)
5. Theory and Problems of Computer Graphics (Schaum's Outline) By Zhigang X. and Plastock Ra. (Tata McGraw Hill)

Paper Code: MLE6.5DCCT203c

Paper Name: **Natural Language Processing**

[\(See Scheme of Examination\)](#)

Course Objectives:

CO1. To have an introduction of the fundamental concepts and techniques of natural language processing (NLP).

CO2. To gain an in-depth understanding of the computational properties of natural languages and the commonly used algorithms for processing linguistic information.

CO3. To examine NLP models and algorithms using both the traditional symbolic and the more recent statistical approaches.

CO4. To understand critical concepts from NLP are used to describe and analyze language.

CO5. To perform POS tagging and context-free grammar for the English language.

CO6. To understanding semantics and pragmatics of English language for processing.

CO7. To write programs in Python to carry out natural language processing

Learning Outcomes:

After completing this course, students will be able to-

LO1. Introduction to the fundamental concepts and techniques of natural language processing (NLP).

LO2. Students will gain an in-depth understanding of the computational properties of natural languages and the commonly used algorithms for processing linguistic information.

LO3. The course examines NLP models and algorithms using both the traditional symbolic and the more recent statistical approaches.

LO4. Critical concepts from NLP are used to describe and analyze language.

LO5. POS tagging and context-free grammar for the English language.

LO6. Understanding semantics and pragmatics of English language for processing.

LO7. Writing programs in Python to carry out natural language processing

Unit I

Introduction, Basics of text processing, Spelling Correction: Edit Distance; N-Gram Language Models, Evaluation of Language Models, Basic Smoothing, Computational Morphology, Introduction to POS Tagging, Overview of Hidden Markov Model,

Unit II

Basics of Models for Sequential tagging – Introduction to Maximum entropy and Conditional Random Fields. Constituency syntax parsing, examples of parsing using CKY and PCFG, Introduction to Dependency Grammars and Parsing, understanding of Transition Based Parsing;

Unit III

Distributional Semantics - Introduction, Applications; Word Embedding: Frequency-based embedding, Prediction based embeddings. Lexical Semantics: an overview of WordNet, Word Sense Disambiguation.

Unit IV

Topic models: introduction, LDA; Introduction to Entity Linking and Information Extraction; Text Summarization: an overview of various approaches;

Unit V

Text Classification: introduction and simple practical implementation using Python. Sentiment Analysis: Concept, Analysis, and Applications.

Scheme of Examination (Theory)

Maximum Marks: 100 (80 External + 20 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (10 marks) shall contain 10 questions two from each Unit. Each question shall be of 1 mark. All the questions are compulsory. Section A will be prepared such that questions i through v are multiple-choice questions, while questions vi through x will be fill-in-the-blank questions. Section B (25 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 5 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (45 marks) shall contain 5 questions, one from each Unit. Each question shall be of 15 marks. The candidate is required to answer any three questions by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (10 marks), Seminar Presentation (6 marks) and Class Performance (4 marks).

Recommended Readings

1. Natural Language Understanding, Pearson Education; 2nd edition, James Allen
2. Speech and Language Processing: An Introduction to Natural Language Processing, Computational Linguistics and Speech Recognition, 2e, Jurafsky / Martin.
3. Handbook of Natural Language Processing, Nitin Indurkha, Fred J. Damerau, Taylor and Francis; Second edition
4. The Handbook of Computational Linguistics and Natural Language Processing, Alexander Clark, Chris Fox, Shalom Lappin, Wiley-Blackwell; 1st edition
5. Natural Language Processing with Python: Analysing Text with the Natural Language Toolkit, Steven Bird, Ewan Klein, Edward Loper, Shroff pub.
6. Foundations of Statistical Natural Language Processing, Christopher D. Manning, Hinrich Schütze, MIT press.

Suggested Readings

1. Statistical Methods for Speech Recognition (Language, Speech, and Communication) Fourth Printing Edition, by Frederick Jelinek
2. Neural Network Methods for Natural Language Processing Synthesis Lectures on Human Language Technologies, Yoav Goldberg, Graeme Hirst, Morgan and Claypool Life Sciences.

Paper Code: MLE6.5DCCT203d

Paper Name: **Machine Learning**

[\(See Scheme of Examination\)](#)

Course Objectives:

- CO1. To be able to understand the basics of Machine learning;
- CO2. To be able to understand the different types of datasets;
- CO3. To be able to have the concept of basic classification and clustering algorithms;
- CO4. To be able to understand the concept of simple artificial neural networks;
- CO5. To be able to build and implement a simple ML model and evaluate the results.

Learning Outcomes:

After completing this course, students will be able to-

- LO1. To be able to understand the basics of Machine learning;
 - LO2. To be able to understand the different types of datasets;
 - LO3. To be able to have the concept of basic classification and clustering algorithms;
 - LO4. To be able to understand the concept of simple artificial neural networks;
 - LO5. To be able to build and implement a simple ML model and evaluate the results.
-

Unit I

Introduction: Concept and Applications of Machine Learning(ML), Types of ML Systems: Supervised, Unsupervised, Reinforcement. Cleaning the data: Feature Selection, Row Compression, One-hot Encoding, Normalization, Missing Data.

Unit II

Types of datasets: Training, Validation, Test Dataset; Real open dataset repositories. Decision Trees: Concept, Splitting the data on basis of different attributes, Calculating entropy and choosing the variable for classification. Meaning of Bias, Variance, Underfitting, Overfitting, Hyperparameters.

Unit III

Linear Regression: concept with example; Logistic Regression: concept with example. k-Means Clustering: concept with example, setting the right number of clusters.

Unit IV

Artificial Neural Networks(ANN): Nodes, edges/weights, and sum/activation function of a basic neural network, Three general layers of an ANN, Weight updation and output calculation in case of simple activation functions like binary step function.

Unit V

Importing datasets and preview basic things using library like Pandas. Overview of Scikit-learn library. Building a basic model in Python using steps like : Import libraries, Import dataset,

Scrub dataset, Split data into training and test data, Select an algorithm and configure its hyperparameters, Evaluate the results. Overview of Model Optimization.

Scheme of Examination (Theory)

Maximum Marks: 100 (80 External + 20 Internal)

Duration: 3 Hrs

Minimum Passing Marks: 36%

External

A course will contain 5 units. The question paper shall contain three sections. Section A (10 marks) shall contain 10 questions two from each Unit. Each question shall be of 1 mark. All the questions are compulsory. Section A will be prepared such that questions i through v are multiple-choice questions, while questions vi through x will be fill-in-the-blank questions. Section B (25 marks) shall contain 5 questions (two from each unit with internal choice). Each question shall be of 5 marks. The candidate is required to answer all 5 questions. The answers should not exceed 150 words. Section C (45 marks) shall contain 5 questions, one from each Unit. Each question shall be of 15 marks. The candidate is required to answer any three questions by selecting these three questions from different units. The answers should not exceed 400 words.

Internal

Internal exam shall comprise Theory Exam (10 marks), Seminar Presentation (6 marks) and Class Performance (4 marks).

Recommended Readings

1. Machine Learning with PyTorch and Scikit-Learn: Develop machine learning and deep learning models with Python, by Sebastian Raschka , Yuxi (Hayden) Liu , Vahid Mirjalili, packt publishers.
2. Machine Learning For Absolute Beginners: A Plain English Introduction, Oliver Theobald, Third Ed.
3. Tom M. Mitchell, Machine Learning, First Edition, Tata McGraw-Hill Education.
4. Ethem Alpaydin, Introduction to Machine Learning, 2nd Edition, The MIT Press.
5. Christopher M. Bishop, Pattern Recognition and Machine Learning, Springer.
6. Mevin P. Murphy, Machine Learning: A Probabilistic Perspective, The MIT Press.

Suggested Readings

1. John Paul Mueller, Luca Massaron, Machine Learning For Dummies, For Dummies; 1st edition.
2. O Theobald, Machine Learning for Absolute Beginners: A Plain English Introduction, Scatterplot Press; 2nd edition.
3. Andreas C. Müller, Sarah Guido, Introduction to Machine Learning with Python: A Guide for Data Scientists, O'Reilly; 1st edition
4. <https://www.cmpe.boun.edu.tr/~ethem/i2ml3e/>
5. Aurélien Géron - Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow_ Concepts, Tools, and Techniques to Build Intelligent Systems-O'Reilly Media (2022)

Paper Code:MLE6.5DCC204

Paper Name: Project/Dissertation/Industrial Training

(See Scheme of Examination)

Course Objectives:

- CO1. Identify and define the problem statement
- CO2. Define and justify the scope of the proposed problem
- CO3. Gather and analyze system requirements
- CO4. Propose an optimized solution among the existing solutions
- CO5. Practice software analysis and design techniques
- CO6. Develop technical report writing and oral presentation skills
- CO7. Develop a functional application based on the software design
- CO8. Apply to code, debugging, and testing tools to enhance the quality of the software
- CO9. Prepare the proper documentation of software projects following the standard guidelines
- CO10. Become a master in specialized technology
- CO11. Become updated with all the latest changes in the technological world.
- CO12. Ability to communicate efficiently.
- CO13. Ability to be a multi-skilled engineer with sound technical knowledge, management, leadership, and entrepreneurship skills.
- CO14. Capability and enthusiasm for self-improvement through continuous professional development and life-long learning
- CO15. Awareness of the social, cultural, global, and environmental responsibility of an engineer.

Learning Outcomes

After completing this course, students will be able to:

- LO1. Identify and define the problem statement
 - LO2. Define and justify the scope of the proposed problem
 - LO3. Gather and analyze system requirements
 - LO4. Propose an optimized solution among the existing solutions
 - LO5. Practice software analysis and design techniques
 - LO6. Develop technical report writing and oral presentation skills
 - LO7. Develop a functional application based on the software design
 - LO8. Apply to code, debugging, and testing tools to enhance the quality of the software
 - LO9. Prepare the proper documentation of software projects following the standard guidelines
 - LO10. Become a master in specialized technology
 - LO11. Become updated with all the latest changes in the technological world.
 - LO12. Ability to communicate efficiently.
 - LO13. Ability to be a multi-skilled engineer with sound technical knowledge, management, leadership, and entrepreneurship skills.
 - LO14. Capability and enthusiasm for self-improvement through continuous professional development and life-long learning
 - LO15. Awareness of the social, cultural, global, and environmental responsibility of an engineer.
-

Practical Training and Project Work:

1. Project Work may be done individually or in groups in case of bigger projects. However, if the project is done in groups, each student must be given responsibility for a distinct module and care should be taken to monitor the individual student.
2. Project Work can be carried out in the college or outside with prior permission of the college.

3. The Student must submit a synopsis of the project report to the college for approval. The Project Guide can accept the project or suggest modification for resubmission. Only on acceptance of the draft project report, the student should make the final copies.

Submission Copy:

The Student should submit a spiral-bound copy of the project report.

Format of the Project:

1. **Paper:**

The Report shall be typed on White Paper of A4 size.

2. **Final Submission:**

The Report to be submitted must be original.

3. **Typing:**

Font:- Times New Roman

Heading:- 16 pt., Bold

Subheading:- 14 pt, Bold

Content:- 12 pt.

Line Spacing:- 1.5 lines.

Typing Side:- One Side

Font Color:- Black.

4. **Margins:**

The typing must be done in the following margin:

Left: 0.75"

Right: 0.75"

Top: 1"

Bottom: 1"

Left Gutter: 0.5"

5. **Binding:**

The report shall be Spiral Bound.

6. **Title Cover:**

The Title cover should contain the following details:

Top: Project Title in block capitals of 16pt.

Centre: Name of project developer's and Guide name.

Bottom: Name of the university, Year of submission all in block capitals of 14pt letters on separate lines with proper spacing and centering.

7. **Blank sheets:**

At the beginning and end of the report, two white blank papers should be provided, one for the Purpose of Binding and the other to be left blank.

8. **Content:**

- I). Acknowledgment
- II). Institute/College/Organization certificate where the project is being developed.
- III). Table of contents
- IV). A brief overview of the project
- V). Profiles of problems assigned
- VI). Study of Existing System
- VII). System Requirement
- VIII). Project plan
 - o Team Structure
 - o Development Schedule
 - o Programming language and Development Tools
- IX). Requirement Specification

X).Design

- Detailed DFD and Structure Diagram
- The data structure, Database, and File Specification

XI).Project Legacy

- Current Status of project
- Remaining Areas of concern
- Technical and Managerial Lessons Learnt
- Future Recommendations
- Nomenclature and Abbreviations.
- Bibliography
- Source Code

Teaching-Learning Process

The teaching-learning process may include the following-

- Lectures
- Discussions
- Simulations
- Virtual Labs
- Role-Playing
- Participative Learning
- Interactive Sessions
- Seminars
- Research-based Learning/ Dissertation/ Case Study/ Project Work

The Blended Learning mode of teaching and learning is preferable in which offline (face-to-face) and online learning both are used to provide learners the opportunity to enjoy both of the worlds. Teachers can share instructions, lecture notes, and assignments online. On the other hand, students can share information/work/assignments with teachers and other students directly in a collaborative setting. This may have a more enriched learning experience, and collaboration between students can be improved upon if group activities rely on information gathered from online resources or lessons. Students who complete online coursework followed by interactive, face-to-face class activities have richer educational experiences.

Assessment and Evaluation

1. ELIGIBILITY FOR ADMISSION

Graduation with 55% and PGDCA from the MGS University and affiliated colleges under the jurisdiction of the university shall be eligible for admission to the M.Sc.(CS) LE Course. (Relaxation to SC/ST etc. as per State Government/University Admission Rules)

2. PASS CRITERIA

For passing in the examination, a candidate is required to obtain at least a Satisfactory Grade in each paper (Internal + External) and also acquire a Satisfactory Grade in theory and practical separately (in each semester examination).

INSTRUCTIONS FOR PRACTICAL EXAMINATION

Marks Distribution for Practical Exam -

Each practical exam is to be conducted by two examiners one External and one Internal. The external examiner should be a senior lecturer from the jurisdiction of other universities. Credit Weightage distribution for external practical of 2 credits (40 marks) is as under

- a) Practical Examination exercise of 3 questions 1 credits (20 marks)
- b) Viva-Voce 0.5 credit (10 marks)
- c) Laboratory Exercise File 0.5 credit (10 marks)

Marks distribution for External Project report of 12 Credits (240 marks) is as under

External Evaluation-

Research Project/ Case Study 6 credits (120 marks)

Presentation 3 credits (60 marks)

External Viva Voce 3 credits (60 marks)

Internal Evaluation- Project Report + Presentation (40 marks + 20 marks)

INSTRUCTIONS FOR STUDENTS

- The student has to complete two months of career-oriented summer training from any firm/organization. If the student does not get a chance to go for training, he/she can choose a research topic and can complete the dissertation under the supervision of any of the faculty in his college.
- The student who has to opt for training has to provide a signed certificate from the firm/organization authority stating that the student has spent two months as a trainee in his organization/firm. The student who has opted for a dissertation has to submit his/her dissertation report with a certificate from his supervisor.
- In both cases, the student has to present his work in front of all the faculty members and fellow students at the starting of the next session.

*** An Academic/ Industrial Tour shall be organized by the college/department in every session. A Tour Report shall be prepared and submitted by the students after a study tour to industries/academic institutions of repute.**

- comprehensive and continuous evaluation by mid-semester examinations at regular intervals to find out each course level learning outcome
- Formative assessment on the basis of activities of a learner throughout the program instead of one assessment. For this provision of internal exams, student seminars, and assignments is included
- Open book exam is suggested for internal/ mid-term exams to better facilitate the understanding of the knowledge required
- Group examinations are recommended on problem-solving exercises and in major projects to enhance the teamwork capabilities of the learner
- Collaborative/Individual assignments are useful to enhance the capability of learners to gain domain-specific knowledge
- Student Seminars and Quizzes are recommended for the continuous learning and evaluation process

Key Features of Revised Curriculum

Following are the key features of the revised curriculum-

- Student Centric Teaching and Learning approach
- Technology oriented approach of teaching
- Hand-on Practical/ Laboratory Sessions
- Problem-oriented teaching and learning
- Problem-analysis oriented assignments and evaluation
- Enhance logical thinking and analytical capabilities
